

KAF[®] Bernoulli[®]

Self-Cleaning Automatic Filter

- No contact cleaning
- No process interruption

2.5 - 25PN DN 40-1000 **EN/ANSI/JIS/GOST**

Lloyd's

EN 13445 AD 2000

Applications

The self-cleaning automatic KAF® Bernoulli® filter is a versatile self-cleaning, nearly maintenance-free filter for removal of particulate contaminants from highly polluted waters as well as process fluids e.g. from natural water sources (sea water, river water) and heating or cooling circuits and processes. It operates at a working pressure as low as 0.3 bar and is characterized by extremely low pressure loss, simple, space saving, robust design with high performance and low weight.

Characteristics

- Unique self cleaning function works from 0.1–25 bar
- Minimum working pressure 0.1 bar
- The filter can be integrated in the pipe system in any installation position
- Filtration rate ≥ 100 µ/micron 10 mm
- Very low maintenance
- Low energy consumption
- Only few spare parts needed. Deliverable in SET's for easy and regulary preventional maintenance.

Approvals

3.1. Certificate, DGRL/TÜV, GL, LS, DNV, ABS, TR TF/TR CU Certificates (EAC), ASME U-Stamp, Lloyd's Register Type Approval Certificate No. 16/20086

C ${f \epsilon}$ conformity evaluation according 2014/68/EU and marking according the directive.

Brief description

The KAF[®] Bernoulli[®] is a fully automatic self-cleaning filter and can be mounted vertically as well as horizontally. During operation the medium flows throgh the strainer insert from inside to outside and the dirt remains inside the strainer. The filter is equipped with a differential pressure monitoring system that automatically triggers the flushing process before any blockages in the filter strainer cause significant flow reductions. The flushing process can also take place after a predetermined time. Due to the a specially shaped flushing disk the speed between the disk and strainer in the flushing process rises. The resulting local pressure drop causes an internal suction effect and the contaminant particles are removed from the strainer insert. Solid components are flushed out via the opened flush valve.

- Outlet flow is not interrupted in this process; the flushing volumes are low
- The pressure drop in the system is minimal

Notice:

The compatibility between medium and vessel or sealing material is the responsibility of the operator.

The design of the pressure vessel is based on a quasi-static operation (load cycle number \leq 1000 according to AD 2000 Merkblatt S1, section 1.4). Max. Differential pressure inlet - outlet 1 bar.

Functional description of the cleaning process

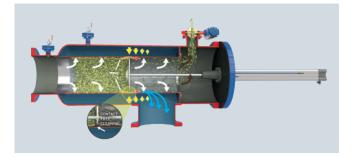

The contaminated medium flows into the filter through the flange marked "inlet". The contaminated medium flows through the filter insert from the inside to the outside and exits out of the flange marked "outlet" as cleaned medium. The flushing phase of the filter is either activated when the set differential pressure is attained, or the flushing phase is activated after a set time interval or by pressing the button. The flushing valve opens and larger contaminant particles are flushed out with the continuously flowing medium stream due to a pressure gradient. Subsequently the piston usually performs two strokes, thereby increasing the speed between the flushing disc and strainer wall. The contaminants are sucked off due to the resultant local pressure drop. The flushing time can be set by the controller according to the operating conditions, and flushing frequency depends on the level of contamination in the medium.

Operating instructions

The comprehensive instructions accompanying the filter must be followed!

The filter is installed in piping via flanges. Ensure that the standard version of the filter is installed vertically or horizontally in a mechanically stress-free manner without additional loads. The medium must flow in the direction specified on the housing. Incorrect installation can cause filter malfunctions. If the flush outlet pipe is installed with a gradient ensure that the inlet pressure of the filter is at least 0.3 bar higher than the counter pressure in the flush outlet pipe (pay attention to the loss through friction in pipes). Before using with another medium or other operation conditions than specified in the design, the resistance of the materials of the pressure-bearing parts and seals touched by the medium to be filtered must be checked by the customer; it may be necessary to consult with the manufacturer and to execute a conformity evaluation in accordance with PED EN 2014/68/ EU (if there is a CE-marking requirement).

The filter needs regularly maintenance (every 1–2 years). Please consider instructions delivered with the filter.

** Repair; not recommended for ATEX certified components

*** Recommended for ATEX component - complete with certificate

Recommended spare part sets KAF®

For commissioning / continuous operation & strategical spares

- Please note this is only a general recommendation, which may have project related changes.
- Please ask for your detailed spare part quotation for your self-cleaning filter.
- After your definitions of spare packages, Krone will check if technical developments apply and always quote newest technical development.
- 2- 4 weeks
- ─ 4− 8 weeks
- 10–16 weeks for special materials or versions
- * Lead time depends on version, model and materials. Exact delivery time will be mentioned in quotation by Krone Filter Solutions.
- ** Dependent on filter operational stress/flush frequency depending on water quality.
- *** If purchased together with 2–3 year operational spares the SET 2 and 3 can be reduced to 1 pcs.
- **** Recommended number of strategical spare packages 30% of filter's in operation/min. 1 package. If purchased with 4–7** years operational spares package can be reduced by those positions.

Type Approval Certificate

This is to certify that the undernoted product(s) has/have been tested with satisfactory results in accordance with the relevant requirements of the Lloyd's Register Type Approval System.

Manufacturer	Krone Filter Solutions GmbH
Address	Industriestr. 19, Oyten, 28876, Germany
Туре	Automatic self-cleaning and basket filters
Description	Single, duplex and self-cleaning automatic filter with several housing sizes and combinations made from standard materials spheroidal iron castings EN- GJS-500-7 (GGG 50)* or EN-GJS-400-15 (GGG 40), carbon steel optional rubber lined or stainless steel.
Trade Name	KSF, KMF, KDF-K, KDF-V, KAF, KAF-S, KAF-G, KRF
Application	Filter depending on type for diesel oil, oil or water piping systems in ship and offshore installations classed or intended for Classification with Lloyd's Register.
Specified Standard	Lloyd's Register Rules and Regulations for the Classification of Ships, July 2021
Other Conditions	The manufacturer's installation instructions are to be sought. *) Not to be used for applications with expected significant chock or vibration loads.

TEST REPORTS

-	Production Quality Assessment in Oyten	30.06.2021
HPC1461050/01	LR Works Inspection including hydrostatic burst pressure tests at 100 bar for type	14.12.2015
	KSF: DN 50, size 2; KSF: DN 80, size 4 and KSF: DN 100, size 8	
HPC1461050/02	hydrostatic burst pressure tests at 100 bar for type KMF: $2 \frac{1}{2}$ " size 4;	17.12.2015
	type KDF-K : DN 80, size 6 and KDF-K: DN 20, size 2	
	witnessed by LR Surveyor at Krone in Oyten	
HPC1461050/03	hydrostatic burst pressure tests at 40 bar for type KAF: DN 200, PN 10 and	21.12.2015
	at 64 bar for type KDF-V: DN 150, size 7, PN 16	
	witnessed by LR Surveyor at Krone in Oyten	
HPC1461050/04	Visit of an existing installation with function test of KAF self-cleaning automatic	11.01.2016
	filter at 'Elbphilharmonie Hamburg'

Supplementary Type Approval Terms and Conditions

Type Approval certifies that a representative sample of the product(s) referred to herein has/have been found to meet the applicable design criteria for the use specified herein. It does not mean or imply approval for any other use, nor approval of any product(s) designed or manufactured otherwise than in strict conformity with the said representative sample.

Type Approval is based on the understanding that the manufacturer's recommendations and instructions and any relevant requirements of the Rules and Regulations are complied with.

Type Approval does not eliminate the need for normal inspection and survey procedures required by the Rules and Regulations. Lloyd's Register EMEA reserves the right to cancel or withdraw this Type Approval Certificate in accordance with the Lloyd's Register Type Approval System Procedure.
