

KDF-K Model with fixed flanges

KDF-KF F=FLEX filter housing GR 1–4 can be combined with several – changeable – flange sizes, the measure L** (installation length) for this version is different from the model with fixed flanges.

Application areas

The KDF-K/KDF-KF duplex filter can be used in pressure and suction modes and is a versatile filter for coarse and fine filtration. It is characterized by continuous filter operation during the cleaning phase. The strainer inserts are compatible with the KSF series. The filter combines the so-called housing sizes (GR) with the various nominal widths (DN) of the flange connection.

The KDF-K/KDF-KF has a bolts and nuts cover closure and can also be delivered a quick release clamp lock (medium-dependent – risk analysis required). Subsequent on-site retrofitting is also possible.

3.1. Certificate, DGRL/TÜV, GL, LS, DNV, ABS, TR TF/TR CU Certificates (EAC),

Lloyd's Register Type Approval Certificate No. 16/20086

Register

Certificate no. 16/20086 ISO 9001:2015 ÖNORM H 5195-1

Type Approval

CE conformity evaluation according 2014/68/EU and marking according the directive.

Brief description

The duplex filter is casted as a single component and comprises two identical single filters wich are connected via a cock-switching device. The medium to be filtered enters the filter basket from the top and flows through the insert inside out. Dirt thus remains in the filter element.

As a special version, the filter is also available with star pleated strainer inserts (changed inlet flow).

Notice:

The compatibility between medium and vessel or sealing material is the responsibility of the operator.

The design of the pressure vessel is based on a quasi-static operation (load cycle number \leq 1000 according to AD 2000 Merkblatt S1, section 1.4). Max. Differential pressure inlet - outlet 1 bar.

Safety instructions

Filters with clamp locks are not suitable for the filtration of hazardous/toxic media (e.G. poisonous, flammable or acids). In such cases, bolts and nuts must be selected as cover closures. Generally, use of filter with cock-switching must be checked for hazardous media (leakage rate permitted by the design). KDF-K/KDF-KF filters are not suitable for the filtration of gases.

Check the filter for intended operation prior to usage. Conformity assessment as per PED EN 2014/68/EU must be done for changes in operating conditions or the media (kindly contact us for the same or run a risk analysis with conformity assessment).

Installation

Installation in pipes is done by means of flanges. Ensure that the standard version of the filter is installed vertically and mechanically tension-free without additional loads. The medium must flow in the direction specified on the housing. Incorrect installation can cause filter malfunctions and damage the inserts. The allowable differential pressure/clogging rate for the insert shall not be exceeded and can lead to equipment damage.

Commissioning

- Check whether all bolts and/or clamp closure have been tightened/fixed. Check the corrected seat.
- Check the position of the switching lever (there is a covered — on the switching valve, which defines the direction of flow and/or shows "in operation" on the filter vessel. The Lever must be fitted accordingly).
- Venting: Venting device wich is installed in each single filter housing has to be opened till the fluid discharges. The filter is ready-to-operate after venting the single filter.
- Filter GR 4 and larger have as an option a pressure equalization line with a ball valve. Before switching the pressure has to be equalized (see pict. 2, page 6).

* Krone Filter Solutions offers this special service to all clients.

Operation

Note: Since it is a pressure vessel, it is important to ensure that the filter is without pressure prior to beginning of maintenance.

- 1. As soon as the filter side is dirty (increasing differential pressure on the indicator or decreasing operating pressure in the system), the clean filter side is put into operation by gradual switching of the plug valve.*
- 2. **Important:** If the filter is build with a pressure equalization line (see picture on page 6), then open line for easier switching and close again after change-over.
- 3. Proceed with cleaning (removal of filter element) only after opening the venting device slowly.
- 4. After opening the drain plug and draining the remaining fluid from the filter side to be cleaned, cleaning can be started:

Caution: note maximum differential pressure of the filter (standard Dp = 1 bar)

Cleaning

The filter side to be cleaned must be depressurized. Open vent carefully after switching over to the other filter side until liquid escapes.

- 1. Then lift by loosening the bolts and nuts of the cover of the filter half to be cleaned.
- 2. Drain the filter via the drain device to a level that is at least below the strainer support.
- 3. Pull the strainer insert upward and out of the filter housing. The strainer can now be cleaned by carefull blowing it out or blasting it with compressed air, steam, or water. If necessary the strainer must be soaked and cleaned in a suitable cleaning agent. In some circumstances optimum cleaning is achieved by means of ultrasonic bath. For all cleaning types ensure that the filter mesh is not damaged.
- 4. Check the seals for wear and tear during assembly, replace if necessary.

Important: Duplex filter with switching valves have a permissible leakage rate. Leakage rate of the KDF-K/KDF-KF filter at delivery condition at max. design pressure (Pdesign) is approx. 20% of the volume of the vessel in approx. 30 minutes.

Information: Hence, do not leave the opened filter unattended and if required, keep an already cleaned reserve filter element ready for replacement.

Important information for switchover

For media having corrosion effect on the material of the filter, switching must be actuated regularly (2–3 times) per week.

Material/housing

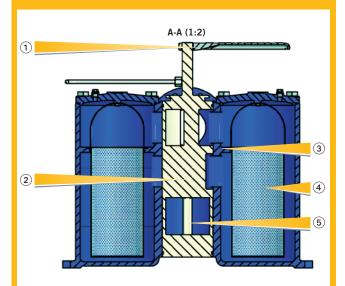

DIN EN GJS-500-7 / (GGG-50/ASTM 80-55-06) alternatively annealed GJS-400-18/(GGG 40.3)

Alternative to the standard switching valves in EN GJS-500-7, switching valves in bronze or standard coated with Magna Coat[®] are also available.

Alternative vessel material

RG 10 G-CuSn(10)5

Advantages of KDF-K/KDF-KF

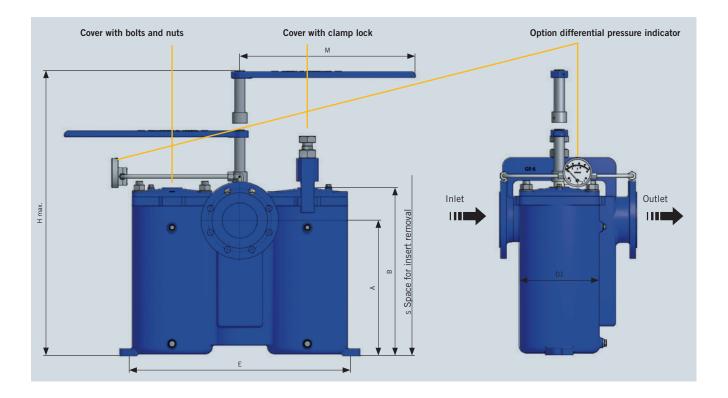

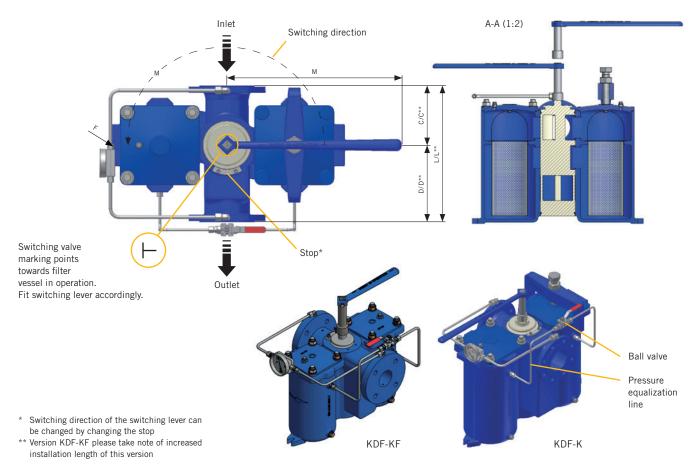

- 1 Large ergonomic switching lever
- ② Smooth switching due to smoothened surface
- ③ Combination of connection flanges to housing sizes/filter areas
- ④ Dirt remains in the basket strainer
- (5) Medium-resistant switching in
 - nodular cast iron
 - bronze
 - polymer coated, Magna Coat®
- Pressure equalization line with ball valve for easy switching and switch protection

Type Approval Certificate

This is to certify that the undernoted product(s) has/have been tested with satisfactory results in accordance with the relevant requirements of the Lloyd's Register Type Approval System.

Manufacturer	Krone Filter Solutions GmbH
Address	Industriestr. 19, Oyten, 28876, Germany
Туре	Automatic self-cleaning and basket filters
Description	Single, duplex and self-cleaning automatic filter with several housing sizes and combinations made from standard materials spheroidal iron castings EN- GJS-500-7 (GGG 50)* or EN-GJS-400-15 (GGG 40), carbon steel optional rubber lined or stainless steel.
Trade Name	KSF, KMF, KDF-K, KDF-V, KAF, KAF-S, KAF-G, KRF
Application	Filter depending on type for diesel oil, oil or water piping systems in ship and offshore installations classed or intended for Classification with Lloyd's Register.
Specified Standard	Lloyd's Register Rules and Regulations for the Classification of Ships, July 2021
Other Conditions	The manufacturer's installation instructions are to be sought. *) Not to be used for applications with expected significant chock or vibration loads.

Supplementary Type Approval Terms and Conditions

Type Approval certifies that a representative sample of the product(s) referred to herein has/have been found to meet the applicable design criteria for the use specified herein. It does not mean or imply approval for any other use, nor approval of any product(s) designed or manufactured otherwise than in strict conformity with the said representative sample.

Type Approval is based on the understanding that the manufacturer's recommendations and instructions and any relevant requirements of the Rules and Regulations are complied with.

Type Approval does not eliminate the need for normal inspection and survey procedures required by the Rules and Regulations. Lloyd's Register EMEA reserves the right to cancel or withdraw this Type Approval Certificate in accordance with the Lloyd's Register Type Approval System Procedure.
