

KDF-VB

Duplex filter with flanged butterfly valves

10-64 DN 65-1.000 ANSI 21/2-40" 65-1.000 GOST 65-1.000

Application areas

The KDF-VB duplex filter can be installed in pressure and in suction line and is versatile for coarse and fine filtration. It is characterized by continuous operation during the cleaning phase. The filter combines so-called housing sizes (GR) with various nominal flange connection widths (DN). The filter unit can be easily switched by a specialy designed lever switch.

The KDF-VB has a combined cover and can also be delivered with bolts and nuts as well as with a quick release clamp (medium-dependent – risk analysis required). Subsequent on-site retrofitting is also possible. A danger analysis has to be performed before start up acc. PED EN 2014/68/EU or applicable codes and standards.

Approvals

3.1. Certificate, DGRL/TÜV, GL, LS, DNV, ABS, TR TF/TR CU Certificates (EAC), Lloyd's Register Type Approval Certificate No. 16/20086

 $oldsymbol{\xi}$ conformity evaluation according 2014/68/EU and marking according the directive.

www.krone-filter.com

Brief description and function

The duplex filter, comprises two identical single filters, connected via a valve-switching device with butterfly valves wich can be switched to only one filter body or can be operated in parallel. Medium to be filtered enters the filter basket from the top and flows through the insert inside out. Dirt thus remains in the filter element.

As a special version, the filter is also available with star pleated strainer inserts (changed inflow of In- and Outlet).

Notice:

The compatibility between medium and vessel or sealing material is the responsibility of the operator.

The design of the pressure vessel is based on a quasi-static operation (load cycle number \leq 1000 according to AD 2000 Merkblatt S1, section 1.4). Max. Differential pressure inletoutlet 1 bar.

Safety instructions

Filters with clamp closure are not suitable for the filtration of hazardous media (e.g. toxic, inflammable or caustic). In such cases, bolts and nuts must be selected as closures. Generally, use of filter with switching valve must be checked for hazardous media. The use of KDF-VB filters for gases requires a review by the manufacturer.

Check the filter for intended operation prior to usage. Conformity assessment as per PED 2014/68/EU must be done for changes in operating conditions or the media (kindly contact us for the same or run a risk analysis with conformity assessment).

Commissioning

- The ball valve of the pressure equalization line between the filter bodies must be opened prior to commissioning.
- Check whether all bolts and locks have been tightened properly.
- Check the position of the switching lever. Lever points at the filter body in operation (see pict. 2).
- Fill the filter by slowly opening the shutt off valve to avoid water hammer.
- Venting: The venting device fitted in the housing of each individual filter must be kept open until fluid escapes. The filter is ready-to-operate after venting the single filter body.
- Check whether the ball valve of the pressure equalization line between the filter bodies is closed after commissioning (see pict. 3).

Note:

For rubberlined units and other inserted plugs. Always counter hold with appropriate tool (open end wrench) when loosening the plug in order to avoid damage to vessel body and lining by over torque force to plug on filter vessel. Follow documentation instructions (GA drawing) ect.

Operation

Caution: Since it is a pressure vessel, it is important to ensure that the filter is without pressure prior to beginning of maintenance.

- As soon as one filter side is dirty (increasing differential pressure on the indicator or decreasing operating pressure in the system), the clean filter side is put into operation by gradual switching.
- 2. **Important:** The pressure equalization line must be opened before switching. If this instruction is not followed, switching unit can get damaged.
- 3. Switching process: Unlock the safety bolt. Afterwards use the lever to actuate the switching slowly and switch over to other filter side. Lock the safety bolt (see pict. 4).
- 4. Close the pressure equalization line.

Pict. 1 – KDF-V Stainless steel

Pict. 2 – KDF-VB Right-hand side in operation

Pict. 3 – KDF-VB Pressure equalization closed

Pict. 4 – KDF-VB Safety bolt

- 5. Proceed with cleaning (removal of filter element) only after opening the venting device slowly and only after releasing the pressure from the filter body which shall be cleaned (pressure equalization with atmosphere pressure). The cover can be removed. Check if the switch has closed the filter body properly and that there is no leakage. In case of leakage the process has to be stopped and the filter must be isolated via IN/OUT shut off valves.
- After opening the drain device and draining the remaining fluid from the filter side to be cleaned the strainer insert can be pulled upward and out of the filter housing for cleaning.

Caution: note maximum differential pressure of the filter (standard Dp = 1 bar)

Note:

For rubberlined units and other inserted plugs. Always counter hold with appropriate tool (open end wrench) when loosening the plug in order to avoid damage to vessel body and lining by over torque force to plug on filter vessel. Follow documentation instructions (GA drawing) ect.

Important information for switchover

For media having a corrosive effect on the material of the filter, switching must be actuated regularly (2–3 times) per month.

Material/housing

DIN EN GJS-500-7 / (GGG-50/ASTM 80-55-06) alternatively annealed GJS-400-18/(GGG 40.3)

Alternative materials

Filters are alternatively available with autoclave rubber lining, in bronze, or in stainless steel SS316Ti or SS316, and many other materials for the disc of the butterfly valves like duplex SS or aluminium bronze.

- RG 10 G-CuSn(10)5
- Stainless steel
- Steel for example PGH 284, St 37.5 and others acc. ASTM

Cleaning

- 1. The filter side to be cleaned must be depressurized (open vent carefully after switching over to the other filter side until liquid escapes).
- 2. Then lift the cover of the filter side to be cleaned by loosening the clamp or the bolts and nuts.
- 3. Drain the filter via the drain device to a level that is at least below the strainer support.
- 4. Pull the strainer insert upward and out of the filter housing. The strainer can now be cleaned by carefull blowing it out or blasting it with compressed air, steam, or water. If necessary the strainer must be soaked and cleaned in a suitable cleaning agent. In some circumstances optimum cleaning is achieved by means of ultrasonic bath. For all cleaning types ensure that the filter mesh is not damaged.
- 5. Check the seals for wear during assembly, replace if necessary.

Information: Do not leave opened filters unattended and if required, keep an already cleaned reserve filter element ready for replacement.

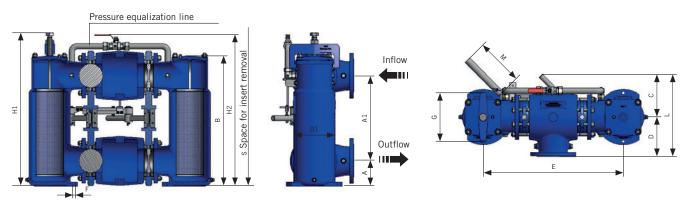

Note:

For rubberlined units and other inserted plugs. Always counter hold with appropriate tool (open end wrench) when loosening the plug in order to avoid damage to vessel body and lining by over torque force to plug on filter vessel. Follow documentation instructions (GA drawing) ect.

Certificate No: LR21315849TA Issue Date: 09/09/2021 Expiry Date: 08/09/2026

Type Approval Certificate

This is to certify that the undernoted product(s) has/have been tested with satisfactory results in accordance with the relevant requirements of the Lloyd's Register Type Approval System.

Manufacturer	Krone Filter Solutions GmbH
Manuacturei	Mone interpolations dinbin

Address Industriestr. 19, Oyten, 28876, Germany

Type Automatic self-cleaning and basket filters

Description Single, duplex and self-cleaning automatic filter with several housing sizes and

combinations made from standard materials spheroidal iron castings EN-GJS-500-7 (GGG 50)* or EN-GJS-400-15 (GGG 40), carbon steel optional rubber

lined or stainless steel.

Trade Name KSF, KMF, KDF-K, KDF-V, KAF, KAF-S, KAF-G, KRF

Application Filter depending on type for diesel oil, oil or water piping systems in ship and

offshore installations classed or intended for Classification with Lloyd's

Register.

Specified Standard Lloyd's Register Rules and Regulations for the Classification of Ships, July 2021

Other Conditions The manufacturer's installation instructions are to be sought.

*) Not to be used for applications with expected significant chock or vibration

loads.

Supplementary Type Approval Terms and Conditions

Type Approval certifies that a representative sample of the product(s) referred to herein has/have been found to meet the applicable design criteria for the use specified herein. It does not mean or imply approval for any other use, nor approval of any product(s) designed or manufactured otherwise than in strict conformity with the said representative sample.

Type Approval is based on the understanding that the manufacturer's recommendations and instructions and any relevant requirements of the Rules and Regulations are complied with.

Type Approval does not eliminate the need for normal inspection and survey procedures required by the Rules and Regulations. Lloyd's Register EMEA reserves the right to cancel or withdraw this Type Approval Certificate in accordance with the Lloyd's Register Type Approval System Procedure.

Lloyd's Register Group Limited, its affiliates and subsidiaries and their respective officers, employees or agents are, individually and collectively, referred to in this clause as 'Lloyd's Register'. Lloyd's Register assumes no responsibility and shall not be liable to any person for any loss, damage or expense caused by reliance on the information or advice in this document or howsoever provided, unless that person has signed a contract with the relevant Lloyd's Register entity for the provision of this information or advice and in that case any responsibility or liability is exclusively on the terms and conditions set out in that contract.
